I think this is a very nice addition to the other related DLC.

I would recommend having the extra characters so long as you plan on using the other DLC. I can not recommend this product on simple fact sizes alone are too different to just use, no battlers, nothing for MV system that's built in. I expect if I'm buying a product as DLC for MV that it would be fully capable of current features MV offers as this is not. I love POP! series of graphics but there is a huge blunder on this product.

You see, okay you got map graphics and faceset emotions for your characters.

But you get no battler animation for either side view or front view.

That is a bad thing to experience, since the package seems incomplete.

So why I would recommend this pack then?

Well, check out the description of the product. It gives you what it says it gives you. Nobody said anything about battlers. And that's why my review is still positive, while I believe the developer should add some content to make it a little more appealing and useful.
